Education

San José State University **Aug. 2026 – Expected May 2028**
B.S. in Materials Engineering *San Jose, CA*

Modesto Junior College **Aug. 2022 – May 2026**
A.S. degrees for Transfer in Mathematics, Physics, and Engineering *Modesto, CA*

Society of Manufacturing Engineers (SME) **May 2026**
Certified Additive Manufacturing Fundamentals (CAMF)

Technical Skills

CAD / Design: OnShape, Autodesk Fusion 360, AutoCAD, Autodesk Inventor
3D Printing: FDM (Creality CR10-V2), Ultimaker Cura, manual bed leveling & calibration, G-Code editing
Fabrication: Manual milling & turning, arc & gas welding, metrology (dial indicators, ±0.001" tolerances), hardness and tensile testing
Software: C/C++ (exposure)

Experience

Modesto Junior College **Jan. 2023 – Dec. 2025**
Peer Tutor – Mathematics, Physics, Engineering, Chemistry *Modesto, CA*

- Tutored mathematics (College Algebra through Calculus IV), Physics I–III, General Chemistry I–II, Properties of Materials, and Engineering Graphics including CAD instruction – over three years.
- Self-studied and tutored Statistics, Business Calculus, and Financial Accounting without formal coursework, demonstrating rapid technical self-learning ability.

Wildfire Public House **2021 – Aug. 2026**
Expo / Host / Busser *Modesto, CA*

- Kitchen quarterback – coordinated in real time between kitchen and service staff, managing allergy flags, clarifying ticket ambiguities before production, and ensuring every plate went out accurately and on time under sustained pressure.

Self-Employed **Ongoing**
Residential Handyman *San Jose, CA*

- Installed ceiling fans, wall-mounted displays, reverse osmosis systems, and custom lighting – developing practical skills across electrical, plumbing-adjacent, and general construction domains.

Projects

RF Key Finder Enclosure – Client Capstone | *OnShape, FDM 3D Printing* **2026**

- Designed a slim PCB and battery enclosure that mounts flush to the back of a phone case and is concealed by a pop socket, for a client's custom RF key finder device.
- Derived part dimensions from online circuit board images without physical hardware access, requiring precise measurement reasoning and tolerance planning from indirect references.
- Executed 9+ design iterations in OnShape to achieve final toleranced fit, accounting for FDM print shrinkage and assembly clearances.

Autonomous Solar Tracking System – Lead Designer | *CAD, FDM 3D Printing, Electronics* **2024**

- Designed and 3D printed a single-axis solar tracker: an Arduino Uno rotates the panel mast 360° through a servo and timing belt, records solar cell output, and returns to the angle of peak output.
- Designed all 8 printed PLA/TPU parts from scratch in one 8-hour session around off-the-shelf bearings, 1/4-20 and M2 fasteners, and electronics; no glue, fully disassemblable, and every part fit on the first print.

Custom Guitar Hanger | *CAD, FDM 3D Printing – PLA & TPU* **2026**

- Designed a wall-mounted guitar hanger with press-fit TPU cushion inserts to protect instrument finish – a deliberate multi-material design pairing rigid PLA structure with flexible TPU contact surfaces.

Custom Assyrian Name Prints – Small Business | *CAD, FDM, Cura* **2021 – 2023**

- Designed, printed, and sold custom Assyrian script name pieces through word-of-mouth, managing end-to-end product design, slicer parameter optimization, print quality control, and customer fulfillment.
